

PROTECTAPEEL

PAINT • PROTECT • PEEL

Preserving aircrafts during long term storage and mothballing.

Protectapeel's long term storage system is a liquid applied, weather resistant, peelable coating designed to provide high strength protection for aircrafts during long term storage externally and internally and mothballing.

The skin-tight plastic film provides protection against weathering, UV light degradation, abrasion and corrosion enabling aircrafts and components to be stored externally for up to 24 months at a time.

Protectapeel's long term storage system meets US Mil-C-6799C.

Protectapeel's storage system is applied in 2 parts; SC 1074 is applied first as the base coat, SC 1090 is then applied as the waterproof top coat. The unique 2 part system protects most non porous surfaces from damage and degradation that often occurs when stored externally. The peelable coating can be peeled back at any time revealing equipment clean, undamaged and ready for use.

Protectapeel is easy to apply by spray or roller and provides external protection for up to 24 months.

What can Protectapeel do for you?

Protects against UV light and weathering damage.	✓
Protects from surface abrasion.	✓
Prevents degradation.	✓
Protects against corrosion.	✓
Reduces cleaning time and cost.	✓

Protectapeel products can be applied by airless spray or roller and removed by hand peeling or pressure washing. Information relating to the application of all the Protectapeel products is available from Spraylat International Ltd.
